Financial Sales Performance Dashboard

Excel Data Analysis Project Report

Project Overview

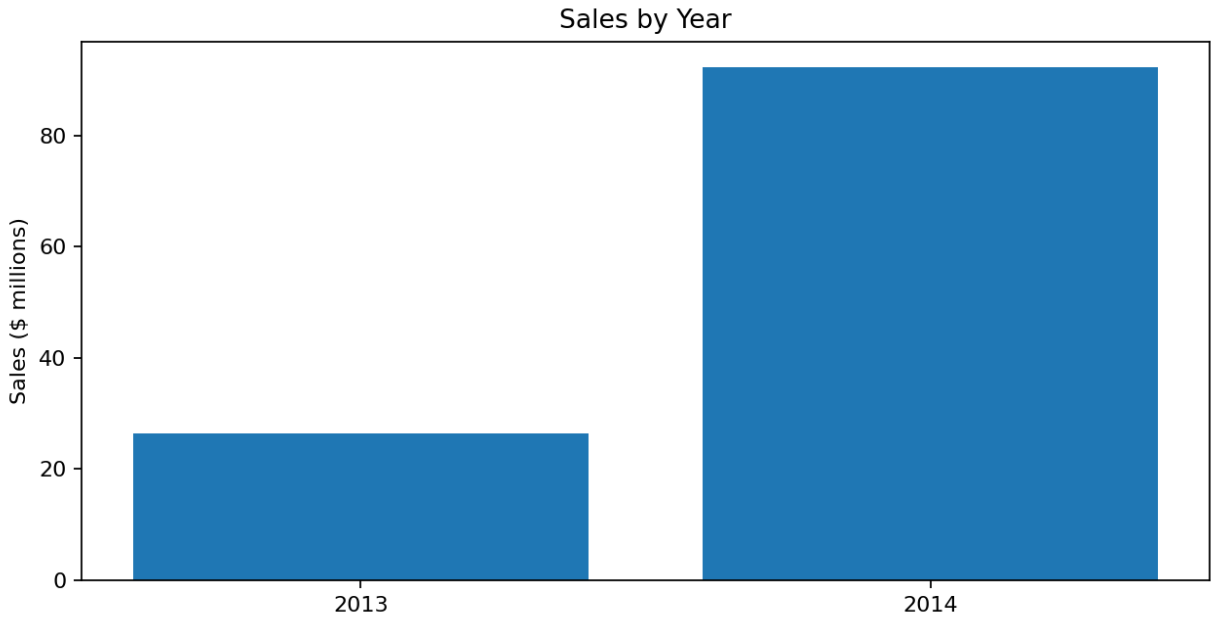

This report summarizes the analysis contained in the supplied Project Financial Sample.xlsx workbook. The workbook includes a financial transaction dataset, a dashboard sheet, and four supporting analysis sheets (PS1–PS4). The focus is on sales, profit, discounts, products, countries, business segments, and year-wise performance.

Metric	Value
Total Sales	$118,726,350
Total Profit	$16,893,702
Gross Sales	$127,931,598
Total Discounts	$9,205,248
Cost of Goods Sold (COGS)	$101,832,648
Units Sold	1,125,806
Approx. Profit Margin	14.2%

Dataset and Method

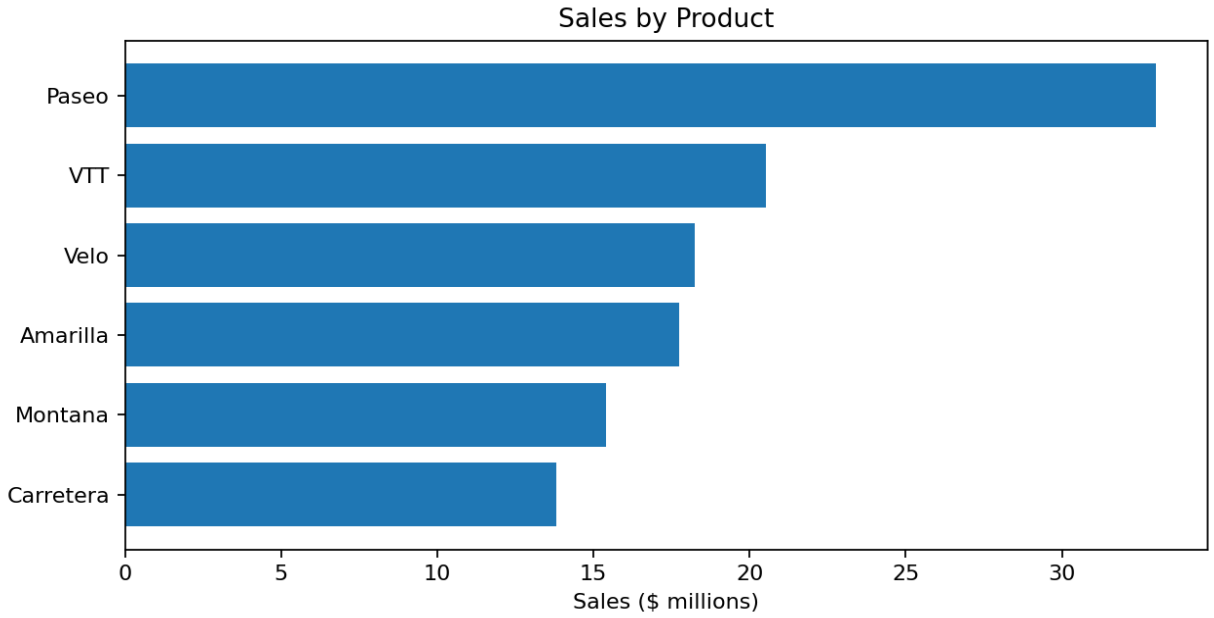

The Financial data sheet contains 700 transaction rows and 16 fields. Key measures were aggregated from the workbook, including sales, profit, gross sales, discounts, COGS, and units sold. Grouped sales totals were calculated by year, product, country, and business segment. Figures are shown in the workbook's currency units (displayed as $ in the source-style financial data).

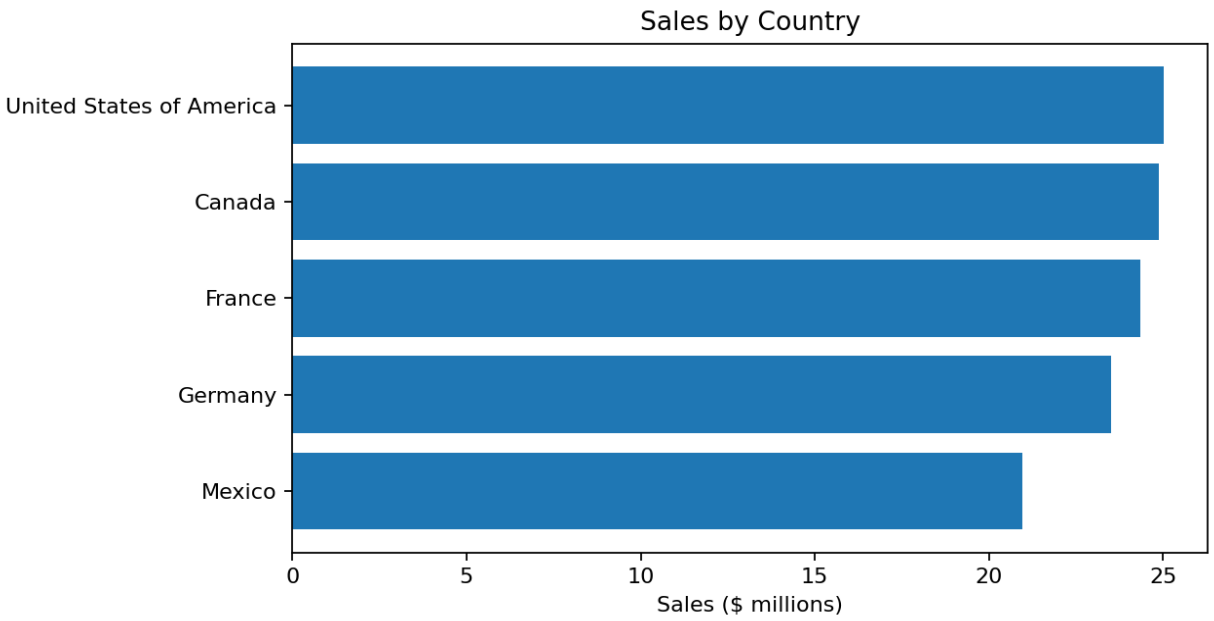

Sales Trend by Year

Year	Sales
2013	$26,415,256
2014	$92,311,095

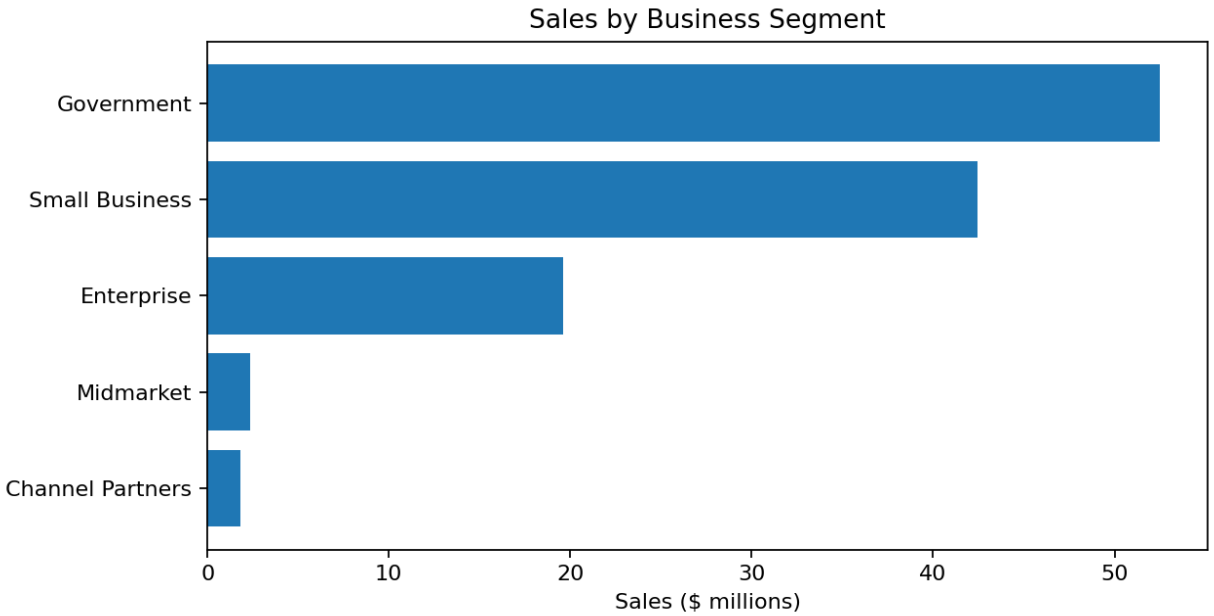

Product and Country Performance

The highest-selling product is Paseo with $33,011,144 in sales. The leading country by sales is United States of America with $25,029,830. These are sales rankings only; profitability and discount patterns should also be considered before drawing business conclusions.

Business Segment Performance

Rank	Segment	Sales
1	Government	$52,504,261
2	Small Business	$42,427,918
3	Enterprise	$19,611,694
4	Midmarket	$2,381,883
5	Channel Partners	$1,800,594

Key Findings

• Total sales: $118,726,350 across 700 transaction rows.

• Total profit: $16,893,702; overall profit margin is approximately 14.2%.

• Total discounts: $9,205,248 (about 7.2% of gross sales).

• Leading product by sales: Paseo; leading country: United States of America.

• Leading business segment by sales: Government.

Recommendations

• Add dashboard filters or slicers for year, country, product, and segment to support interactive exploration.

• Compare profit margin and absolute profit alongside sales to avoid prioritizing high-revenue but low-profit areas.

• Investigate negative-profit transactions and high-discount rows to understand their drivers.

• Keep a clear record of metric definitions and refresh the dashboard whenever the underlying dataset changes.

• For a portfolio presentation, include the Excel workbook, this PDF report, and the PowerPoint slides in the GitHub repository.

Tools and Skills

Microsoft Excel • Pivot Tables • Charts and Data Visualization • Financial Data Analysis • Dashboard Reporting • Business Insights
